CERTIFICATE OF INDEPENDENT BID DETERMINATION

- 1 This Municipal Bidding Document (MBD) must form part of all bids¹ invited.
- 2 Section 4 (1) (b) (iii) of the Competition Act No. 89 of 1998, as amended, prohibits an agreement between, or concerted practice by, firms, or a decision by an association of firms, if it is between parties in a horizontal relationship and if it involves collusive bidding (or bid rigging).² Collusive bidding is a *pe se* prohibition meaning that it cannot be justified under any grounds.
- 3 Municipal Supply Regulation 38 (1) prescribes that a supply chain management policy must provide measures for the combating of abuse of the supply chain management system, and must enable the accounting officer, among others, to:
 - a. take all reasonable steps to prevent such abuse;
 - b. reject the bid of any bidder if that bidder or any of its directors has abused the supply chain management system of the municipality or municipal entity or has committed any improper conduct in relation to such system; and
 - c. cancel a contract awarded to a person if the person committed any corrupt or fraudulent act during the bidding process or the execution of the contract.
- 4 This MBD serves as a certificate of declaration that would be used by institutions to ensure that, when bids are considered, reasonable steps are taken to prevent any form of bid-rigging.
- 5 In order to give effect to the above, the attached Certificate of Bid Determination (MBD 9) must be completed and submitted with the bid:

¹ Includes price quotations, advertised competitive bids, limited bids and proposals.

² Bid rigging (or collusive bidding) occurs when businesses, that would otherwise be expected to compete, secretly conspire to raise prices or lower the quality of goods and / or services for purchasers who wish to acquire goods and / or services through a bidding process. Bid rigging is, therefore, an agreement between competitors not to compete.

The introduction of advanced metering infrastructures by the utilities on their way towards smart grids and the support of various means of communication between smart meters and back office systems enable the introduction of centralized prepaid energy solutions. These solutions take care of the overall control of the end customer’s account and energy consumption in the back office system. These systems offer functionalities, such as support of flexible tariff models, different payment methods, discount and bonus programs, easier

consumer access to their account and status information, e.g. balance alerts, recharge & transaction history and consumption graphs.

In addition, also the various provisioning activities at the meters, like tariff and threshold changes, load limitations, reconnection procedures, reconciliation, notifications etc. can be initiated, performed and controlled from the back office of the utility. This reduces the effort for the utilities' field service.

1. TID Rollover

Vending system manufacturers are required to update their vending system software to cater for the new hardware secure module API and key load files and associated rules.

The Token Identifier is a 24-bit field, contained in STS compliant tokens, that identifies the date and time of when the token was generated. It is used to determine if a token has already been used in a prepayment meter. The TID represents the number of minutes elapsed since the base date of 1 January 1993.

The incrementing of the 24-bit field means that at some point in time, the TID value will roll over to a zero value. Notably, the TID has a limited range and will run out in November 2024, at which point all existing prepayment meters will stop accepting credit tokens. In order to circumvent this issue, the memory of each meter needs to be cleared of all stored TIDs and its cryptographic key needs to be changed before 2024.

The service provider is to include a comprehensive TID rollover plan as part of its proposal
